

VT Protean Capital ELDeR Fund

September 2025 Factsheet

Fund Overview

The fund aims to deliver superior risk adjusted returns with low volatility and correlation to conventional assets. This is achieved by applying leading edge risk management to an actively managed portfolio of bespoke defined return investments. The fund invests in institutional structured securities and high-quality corporate bonds alongside positions in liquid derivatives linked to global benchmark indices. Exposure to the full range of defined return strategies allows optimal allocation over the investment cycle and portfolio diversification.

Commentary

September saw equity markets perform well across the board with limited drama. The fund (Class A Accumulation) returned 0.64% in the month taking the annualised YTD growth rate to 7.91% despite maintaining a relatively low beta. A distribution of 1.195188p (Class A Income) was declared for the quarter, equalling the June distribution and representing a 2.54% increase on the same period in 2024.

Portfolio turnover remained low with the manager taking advantage of the high market levels to reduce/recycle positions in some seasoned holdings.

Risk Considerations

This summary highlights some potential risks of investment. Any investment should only be made after careful review of the terms and risks set out in the Fund's prospectus which is available directly from the Fund's Authorised Corporate Director (Valu-Trac Investment Management Limited) or via their website (<https://www.valu-trac.com>).

Commodity: As an asset class, commodities can experience higher levels of fluctuation than bonds or money market securities. If the level of commodity markets were to fall significantly, the value of the Fund may be adversely affected.

Counterparty: The Fund may conclude various transactions with contractual partners. If a contractual partner becomes insolvent, it may no longer or may only partly settle unpaid debts owed to the Fund.

Credit: If the credit quality of the guarantor of a security held within the Fund deteriorates, it may adversely impact the value of the security.

Currency: The Fund may invest in overseas securities. Movements in exchange rates may, when not hedged, cause the value of investments to increase or decrease.

Derivatives: Investments in derivatives may result in gains or losses that are greater than the original amount invested.

Equities: The value of an equity security may go up or down based on the economic performance of the issuer. Equity securities could be exposed to volatility in the market or sector in which the issuer operates as well as the volatility of the general economy.

Interest rate: Some of the Fund's financial instruments may be interest bearing. As such, the Fund may be exposed to interest rate risk due to fluctuations in the prevailing market rates.

Legal/tax: Tax regulations and concessions are not guaranteed and can change at any time. The levels of tax benefits and liabilities arising from an investment in the Fund will depend upon individual circumstances and may change in the future.

Liquidity: During difficult market conditions, some securities or larger holdings may not be able to be bought or sold quickly enough to prevent or minimise a loss
